# How TRACC Enabled Us To Review Our Accessibility

## The Issue

Matthew Wolstenholme, Program
Manager of Operational Planning at
Ottawa city, found his biggest bugbear
was not being able to integrate
localised changes on the Transit
Network and therefore couldn't uphold
his role efficiently for assessing
customer journey time and service
reliability.

Matthew Wolstenholme Manager, Service Planning City of Ottawa

## The Solution

Since deploying TRACC, Matthew has been able to run calculations based on relevant criteria for his network, present a supporting case and utilise TRACC for further projects in his pipeline.

#### Calculate

Run iterative assessments and run re calculations to give peace of mind.

### **Future-Proofed**

As cities PT networks expand, TRACC can facilitate new changes in journey times, route changes for commuters.

#### **Present Results**

Dependent on the reuslts of your project, TRACC is there to support your case.

#### **Overflow**

The success of TRACC for long-term projects has given us confidence to use on short-term projects too.
